

Setup of an auto-gration connector test connection

You have heard about auto-gration and want to set-up the connector, which is provided by the auto-gration team and use it for communication tests with a remote server.

Please follow these steps to do so:

1. Download the connector from the auto-gration web-site <http://www.auto-gration.eu/downloads/software>
2. Install the connector on your computer. Follow the instructions of the [setup manual](#).
3. Request your own station ID [here](#) .
4. Write an email to jwalther@odette.org and request the setup of a connection at the auto-gration test server .
5. You will receive a confirmation, the url of the test server and the password assigned to your station.
6. Configure the outgoing connection in your connector accordingly and test the connection.
7. You may then send messages to the test server.

If you have further questions or suggestions, please contact jwalther@odette.org .
